ALZHEIMER'S DISEASE CENTER**
of the Northwestern University Feinberg School of Medicine

**YOU can contribute to our understanding of treatments for
Alzheimer's disease!**

Consider joining a research study!

This summer the FDA approved the Exelon® 10cm² Patch for treatment in Alzheimer's disease. The Exelon® Patch was found to be effective in slowing the progression of Alzheimer's disease in individuals with mild to moderate symptoms. Now researchers are comparing the risk and benefit of the Exelon® 10cm² Patch to the experimental Exelon® 15cm² Patch in people who have Alzheimer's disease and show a decline in memory or thinking.

Are you eligible?

- ◆ Are between the ages of 50 and 85
- ◆ Have a diagnosis of mild to moderate Alzheimer's disease
- ◆ Have a friend or relative to assist with the medication and clinical visits
- ◆ Can make a commitment for 72 to 96 weeks and up to 13 visits

Participants Will Receive:

- ◆ Compensation for travel costs
- ◆ Study-related medications at no cost
- ◆ Regular assessments by physicians at the Neurobehavior & Memory Disorders Clinic
